

Sustainable Pavement Solutions

Technical Seminar

Full-Depth Recycling (FDR), Four-Way Intersections, Roller-Compacted Concrete (RCC)

SPONSORS

Wednesday, May 10, 2017

Learn from the Experts

Full Depth Reclamation (FDR) - Digging deeper into this topic, specific projects will be discussed showing proper and improper candidates for FDR. Lessons learned from a contractor's perspective will be addressed as well as ways to protect yourself from typical field complications. Relative cost and environmental impacts will also be covered.

Four-Way Concrete Intersections - Learn about the benefits that concrete intersections provide. This discussion will include design and construction best practices such as: traffic strategies, staging, design, maintenance, and opening times.

Roller Compacted Concrete (RCC) - This presentation is the next step forward as it describes the implementation process and finer details of roller compacted concrete. Project-level details will be provided explaining how to roll out an RCC project from an owner and agency perspective. Mix designs, construction ordering, traffic control, and other in-depth examples will be covered.

Who should attend?

Caltrans design, construction, materials and maintenance staff as well as local agency public works staff, consulting engineers, pavement designers, contractors, suppliers and related technical personnel.

When?
