Learn from the Experts

**Full Depth Reclamation (FDR)** - Digging deeper into this topic, specific projects will be discussed showing proper and improper candidates for FDR. Lessons learned from a contractor’s perspective will be addressed as well as ways to protect yourself from typical field complications. Relative cost and environmental impacts will also be covered.

**Bonded Concrete Overlay on Asphalt (BCOA)** – Get up to speed with long-life, urban concrete pavement solutions for California. Gain expert knowledge and guidance for designing, specifying, and constructing BCOA pavements with a detailed focus on upcoming Caltrans pilot projects.

**Roller Compacted Concrete (RCC)** - This presentation is the next step forward as it describes the implementation process and finer details of roller compacted concrete. Project-level details will be provided explaining how to roll out an RCC project from an owner and agency perspective. Mix designs, construction ordering, traffic control, and other in-depth examples will be covered.

Also, a brief overview of many innovative and sustainable solutions for pavements will be presented.

Who should attend?
Caltrans design, construction, materials and maintenance staff as well as local agency public works staff, consulting engineers, pavement designers, contractors, suppliers and related technical personnel.
